# Nikhil Patil

Dearborn, MI (Open to relocation) | (313)-467-2653 | panikhil@umich.edu | LinkedIn | GitHub

## PROFESSIONAL SUMMARY

Data Science graduate student with 2 years of experience and a strong foundation in analytics & visualization. Proficient in **Python**, **R**, **SQL**, **Spark**, & **ELT** processes, with hands-on in Azure environments. Adept at translating business needs into scalable data solutions and delivering insights through clear, interactive dashboards and reports.

## EDUCATION

**Master of Science Data Science** — Sept 2024 - April 2026
***University of Michigan, Dearborn, MI*** — GPA:3.67

- **Courses:** Database Systems, Deep Learning, Data Mining, Applied Regression Analysis, Big Data Analytics & Visualization, Pattern Rec and Neural Networks, Intelligent Systems, Models of Operational Research, Information Sciences and Ethics

**Bachelor of Engineering in Electronics and Telecommunication** — Aug 2018 – June 2022
***University of Pune (SPPU) Pune, MH, India*** — GPA: 8.8

- **Courses:** Computer Networks & Security, Data Structures and Algorithms

## SKILLS

**Programming Languages:** Python, R, Java, SQL
**Libraries:** Matplotlib, Seaborn, NumPy, Pandas, Statsmodels, TensorFlow, PyTorch, Keras, SpaCy, NLTK, Tesseract
**Data Visualization & Analytics Tools:** Tableau, Power BI, Looker, Alteryx
**Database Solutions & Warehousing:** PostgreSQL, MySQL, MSSQL Server, Data Lakes & Warehousing, ETL/ELT
**Big Data & Distributed Systems:** Apache Spark, PySpark, Hadoop
**Cloud & Data Platforms:** Azure Data Factory (ADF), Databricks, AWS, GCP, Snowflake
**Collaboration Tools:** Git, GitHub, Jupyter Notebook, Google Colab, Microsoft Office
**Key Competencies:** Feature Engineering, Model Evaluation, Predictive & Statistical Analysis, Time-Series Forecasting & Predictive Modelling.

## PROFESSIONAL EXPERIENCE

**University Unions & Events** — **Jan 2025 - Present**
*Information Ambassador* — Dearborn, MI

- Serving as the welcoming first point of contact for new and prospective students at the university, helping them print their **M Cards**, talk through course selection, and explain transcript procedures.

**Data Analyst** — **Jan 2024 – Aug 2024**
*Trainity* — Maharashtra, India

- Built and automated **SQL-based ETL pipelines** to extract, transform, and load 10,000+ operational records, improving data availability and reducing reporting latency.
- Performed **data cleaning, transformation, and exploratory analysis** using Python (Pandas, NumPy) to support operational analytics and decision-making.
- Conducted **statistical analysis, trend analysis, and feature engineering** using Scikit-learn to identify root causes and improve predictive model performance by **20%**.

**Project Analyst** — **Oct 2022 – Dec 2023**
*ReapMind Innovations* — Maharashtra, India

- Designed and maintained **SQL-driven data workflows** to track user login, sign-up, and engagement data for the Happy Harvest Indian grocery platform.
- Collaborated with software and stakeholders to ensure **secure, scalable data capture** aligned with web and mobile application workflows.
- Integrated APIs with backend data systems to enable **data-driven user management and reliable operational reporting** with user activity and engagement data to maintain **accurate records**, identify usage patterns, and support informed decision-making.
- Contributed to end-to-end solutions by aligning **data collection, analytics, and dashboarding** with business and technical requirements.

## PROJECTS

**Energy Consumption Optimization System** — **Sept 2025 – Dec 2025**

- Designed Developed a scalable data lakehouse and time-series forecasting system using Python, SQL, and machine learning to analyze 2M+ utility records and optimize household energy costs through predictive analytics and Power BI insights.

**Azure Utility Data Lakehouse** — **Dec 2025**

- Built an end-to-end Azure-based ETL/ELT pipeline using Azure Data Factory, Databricks, PySpark, and SQL to process large-scale utility data and deliver analytics-ready datasets for interactive Power BI dashboards.

**AgriX – AI Agriculture Intelligence Platform** — **Nov 2025**

- Designed a multi-agent AI and predictive analytics platform using Python and SQL to analyze environmental and operational data, enabling data-driven decision-making and reducing crop loss through forecasting and performance dashboards.
